LATEXand Beamer (as an alternative to Word and PowerPoint)

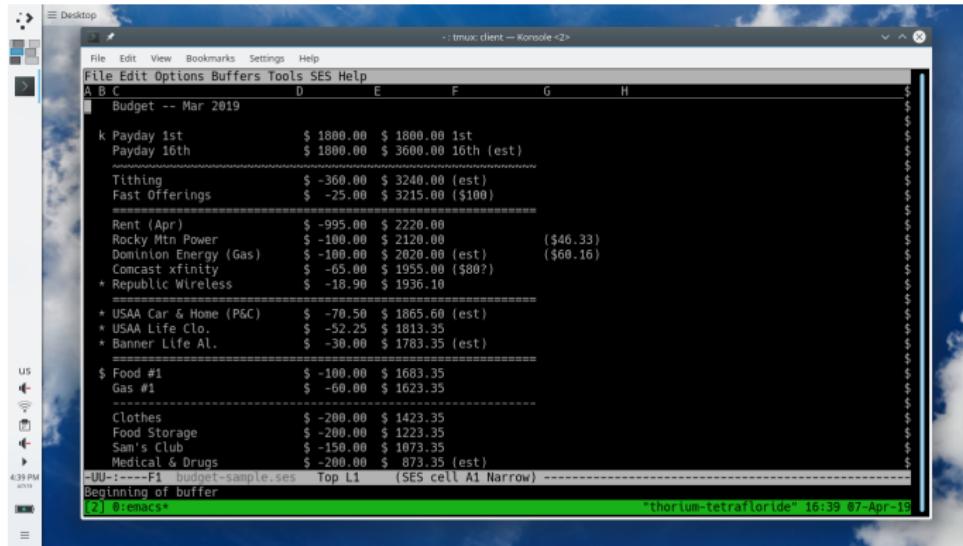

The screenshot shows a tmux session in a terminal window titled "tmux: client — Konsole <2>". The terminal displays LaTeX code for a presentation slide. The code includes a title block, a section for the \$\rho\$-calculus, and a table with two columns. The terminal window is part of a desktop environment with icons for volume, network, and battery status visible on the left.

```
221 | HelloWorld!("Hello, world!")
222 | HelloWorld!("Hola, mundo!")
223 }
224 \end{minted}
225 \end{block}
226 \end{frame}
227
228 \begin{frame}[fragile]{\AlienComputerLanguages}
229   The $\rho$-calculus (an extention of the $\pi$-calculus):\\
230
231   \begin{block}{$\rho$-calculus axioms}
232     Let $P$, $Q$ range over processes, and $x$, $y$ range over variables.
233
234   \begin{table}[h!]
235     \begin{center}
236       \begin{tabular}{l l} % << Alignments: 1st column left, 2nd column left
237         $P$, $Q := 0$ & null process \\
238         $x(y).P$ & input \\
239         $x \langle P \rangle$ & lift \\
240         $x \langle y \rangle$ & drop
241       \end{tabular}
242     \end{center}
243   \end{table}
244
245 \end{block}
246
247 \end{frame}
```

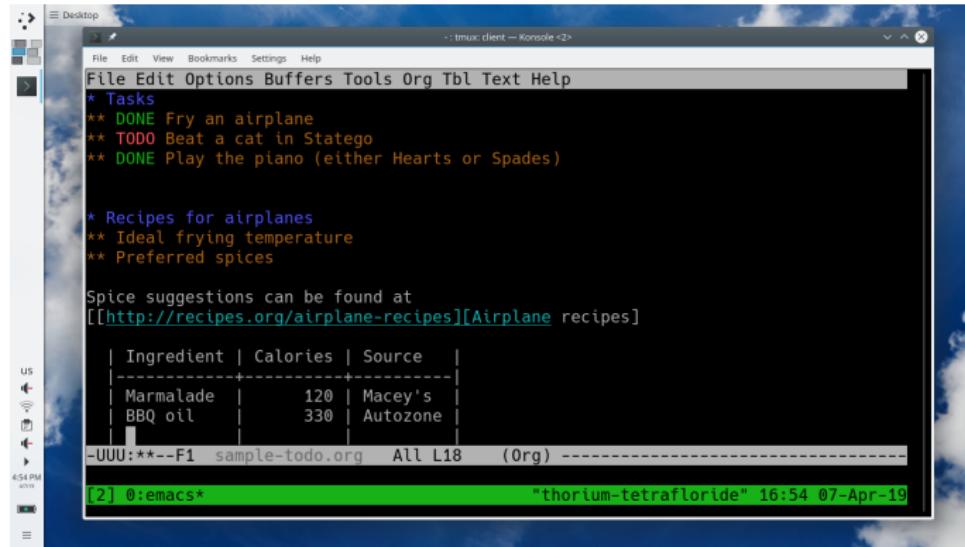

mdp (as a command line alternative to PowerPoint)

Emacs SES (an alternative to Excel, for small things)

Emacs Org Mode (for outlines and text-based notes)

Lily Pond (for music typesetting)

```
<<
\chords {
    c1:m7 f2:7 c2
}
\relative c' {
    g2 es8( c4) es8
    f8 es d c~ c2
}
\addlyrics {
    You are
    the sky and my rain,
}
>>
```

Enter chord names

Enter melody

Enter lyrics

Combine melody and lyrics

You are the sky and my rain,

Alien Computing – Miscellaneous things

Alien Computing – Miscellaneous things

- Cryptography for Identification and Privacy

Alien Computing – Miscellaneous things

- Cryptography for Identification and Privacy
 - nonces
 - cryptographic pseudorandom numbers
 - cryptographic hashes (SHA256) and merkle trees
 - password hashes (scrypt) and salts
 - public key cryptography (RSA)
 - symmetric key cryptography (AES)

Alien Computing – Miscellaneous things

- RISC-V Architecture (an open source instruction set)

Alien Computing – Miscellaneous things

- RISC-V Architecture (an open source instruction set)
- NixOS Package Management

Alien Computing – Computer Languages

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.
- Should make abstractions easy.

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.
- Should make abstractions easy.
- Should be able to do very concrete things.

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.
- Should make abstractions easy.
- Should be able to do very concrete things.

(I like to think of such languages as “*transcendental*”.)

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.
- Should make abstractions easy.
- Should be able to do very concrete things.

(I like to think of such languages as “*transcendental*”.)

- It should be significantly different from C or Python.

Alien Computing – Computer Languages

What does it take for a computer language to interest me?

- Should be simple.
- Should make abstractions easy.
- Should be able to do very concrete things.

(I like to think of such languages as “*transcendental*”.)

- It should be significantly different from C or Python.
- (Most importantly) Needs to offer me something new to learn.

A taste of Forth (for microcontroller programming)

Forth

```
: clockwise 0 ;           : counter-clockwise 1 ;  
  
: step ( motor -- )  
@ dup 1 !      ( run )  
10 delay      ( delay for a step )  
0 ! ;         ( end step )  
  
: set-direction ( direction motor -- )  
2+ @ ! ;  
  
clockwise motor-1 set-direction  
motor-1 step
```

Alien Computing

A taste of Prolog (for declarative programming)

Prolog

```
% A solution to the Towers of Hanoi
move(1,X,Y,_) :-  
    write('Move top disk from '),  
    write(X),  
    write(' to '),  
    write(Y),  
    nl.  
  
move(N,X,Y,Z) :-  
    N>1,  
    M is N-1,  
    move(M,X,Z,Y),  
    move(1,X,Y,_),  
    move(M,Z,Y,X).  
  
?- move(3, left, right, center).
```

A taste of J (for tinkering with mathematics)

J

```
frac      =: % +/
percent   =: (100 & *) @: frac
round     =: <. @: (+ & 0.5)
comp      =: round @: percent
br        =: ,. ; (,. @: comp)
tr        =: ('Data';'Percentages') & ,:
display   =: tr @: br
```

Alien Computing

A taste of Smalltalk (for sending messages to objects)

Smalltalk

```
" looping over a collection "
#('a' 'b' 'c' ) do[:each |
    Transcript show: each.
    Transcript cr.
].
```

```
" the same, using a local variable "
```

```
|myArray|
myArray := #('a' 'b' 'c' .
myArray do[:each |
    Transcript show: each.
    Transcript cr.
].
```

Alien Computing

A taste of E and EROS (for object capabilities)

JavaScript

```
emethod forkReturn (Philosopher thePhilosopher) {  
    if (nowServing == thePhilosopher) {  
        theFork <- revoke ();  
        if (otherIsWaiting) {  
            timerSerialNr += 1;  
            serveOther();  
        } else {  
            nowServing = null;  
            theFork = null;  
        }  
    }  
}
```

Alien Computing

A taste of Erlang (for programming with actors)

Erlang

```
-module(dolphins).  
-compile(export_all).  
  
dolphin() ->  
    receive  
        do_a_flip ->  
            io:format("How about no?~n");  
        fish ->  
            io:format("Thanks for all the fish!~n");  
        _ ->  
            io:format("Heh, we're smarter than humans.~n")  
    end.
```

A taste of Haskell (for purely functional programming)

Haskell

```
eggSize :: Float -> Float -> String
eggSize height radius
| volume < hummingbird = "Just humming a bird along."
| volume < ostrich      = "What are you...chicken?"
| otherwise              = "Talk about being ostrich-sized"
where
    volume = 2 * pi * height * radius ^ 2
    hummingbird = 1000
    ostrich     = 5000
```

A taste of Rholang (for the pi and rho calculi)

Rholang

```
new HelloWorld, stdout(`rho:io:stdout`) in {
    for (@text <= HelloWorld) {
        stdout!(text)
    }
    | HelloWorld!("Hello, world!")
    | HelloWorld!("Hola, mundo!")
}
```

The ρ -calculus (an extention of the π -calculus):

ρ -calculus axioms

Let P, Q range over processes, and x, y range over variables.

$P, Q ::= 0$	null process
$x(y).P$	input
$x\langle P \rangle$	lift
$\neg x^\lceil$	drop
$P \mid Q$	parallel
$x, y ::= \lceil P \rceil$	quote

Alien Computing

A taste of Common Lisp (for the borg-like “all your base are belong to us” nature of the lambda calculus)

Common Lisp

```
(defview employee-form
  (:type form :default-method :post)
  first-name
  (last-name :requiredp t
             :label "Family Name")
  (contract :present-as (radio :choices
                                '(:full-time :part-time
                                  :consultant :intern))
             :parse-as keyword)
  (age :present-as (input :max-length 3)
       :parse-as integer))
```

The λ -calculus:

λ -calculus axioms

Let M, N be lambda expressions and x, y be variables.

$$(\lambda x.M)$$

Abstraction (Function Definition)

$$(MN)$$

Function Application

$$(\lambda x.M[x]) \rightarrow (\lambda y.M[y])$$

α -conversion

$$((\lambda x.M)E) \rightarrow (M[x := E])$$

β -reduction
